

Papa's Calendar — User Manual

Papa's Calendar is a web app that creates printable monthly calendars filled with birthdays, anniversaries, recurring events, holidays, and moon phases. Everything runs in your web browser — there is no account to create and no data is sent to a server.

To open the app, visit: <https://stphngrr.github.io/papas-calendar/>

Quick Start

1. Open the app in your web browser.
 2. Click the **Events** tab on the left.
 3. Upload your CSV file (see "Preparing Your CSV File" below) — or add events by hand.
 4. Click the **Calendar** tab on the left.
 5. Choose a **month** and **year**.
 6. Check which **groups** and **holidays** you want to show.
 7. Review the preview on the right side of the screen.
 8. Click **Download PDF** to save a printable calendar.
 9. Print the PDF at actual size, landscape orientation, on letter paper.
-

The Screen Layout

The screen is divided into two parts:

- **Left side — Control Panel:** Where you manage events, choose the month, toggle groups, and adjust holidays. It has two tabs at the top: **Calendar** and **Events**.
 - **Right side — Calendar Preview:** A live preview of your calendar that updates as you make changes.
-

Calendar Tab

This tab controls what your calendar looks like.

Month and Year

- **Month:** Choose any month from the dropdown (January through December).
- **Year:** Type or use the arrows to pick a year (valid range: 1900–2099).

The calendar preview on the right updates immediately when you change either one.

Title

An optional text field where you can give the calendar a custom heading. For example, if you type **Smith Family**, the calendar title will read **SMITH FAMILY — JANUARY 2025** (all text on the calendar appears in capital letters automatically). If you leave it blank, the title is just the month and year.

Download PDF

Click this button to save your calendar as a PDF file. The PDF is designed for printing on **letter-size paper in landscape orientation** (the wide way). The filename is based on your title — for example, **SMITH FAMILY — JANUARY 2025.pdf**.

Groups

Groups let you organize events into categories — for example, "Mom's Side", "Dad's Side", and "Friends". Each group has a checkbox next to it:

- **Checked** — Events in that group appear on the calendar.
- **Unchecked** — Events in that group are hidden.

This is useful when you print different versions of the calendar for different people. For example, you might uncheck "Dad's Side" to print a calendar that only shows "Mom's Side" events.

You can also:

- **Add a group:** Click **Add Group**, type the name, and click **Save**.
- **Rename a group:** Click **Edit** next to the group name, type the new name, and click **Save**. This updates the name everywhere.
- **Delete a group:** Click **Delete** next to the group name, then click **Confirm**. The group label is removed from all events (the events themselves are not deleted).

Holiday Settings

Click **Show Holiday Settings** to expand this section. You'll see a list of holidays with a checkbox next to each one. Check or uncheck holidays to show or hide them on the calendar.

Built-in holidays include:

- **January:** New Years Day, Martin Luther King Day
- **February:** Ground Hog Day, Lincoln's Birthday, Presidents' Day, Washington's Birthday
- **March:** St Patrick's Day, Spring Begins
- **April:** All Fools' Day, Earth Day, Professionals Day
- **May:** National Day of Prayer, Mother's Day, Armed Forces Day, Memorial Day
- **June:** Flag Day, Father's Day, Summer Begins
- **July:** Independence Day
- **September:** Labor Day, Grandparents Day, Patriot Day, Autumn Begins

- **October:** Columbus Day, National Boss Day, Halloween
- **November:** All Saints' Day, Election Day, Veterans Day, Thanksgiving Day
- **December:** Pearl Harbor Day, Christmas Day, Winter Begins
- **Varies by year:** Palm Sunday, Good Friday, Easter Sunday, Ash Wednesday, Ascension Day

All built-in holidays are enabled by default.

Adding a custom holiday:

At the bottom of the holiday settings, fill in:

1. **Holiday name** — for example, "Grandma's Birthday"
2. **Month** — choose from the dropdown
3. **Day** — type the day number

Then click **Add Holiday**. Your custom holiday will appear on the calendar in that month. To remove it later, click the delete button next to it.

Events Tab

This tab is where you manage your event data — the birthdays, anniversaries, and recurring events that appear on the calendar.

Import / Export

Uploading a CSV file:

Click **Upload CSV** and select your .csv file. The app will read the file and load all the events. You'll see a confirmation message like "423 events loaded — Groups: Hooper, Lewis, Westfahl".

If there are problems with the file, you'll see error messages with specific row numbers so you can fix them in your spreadsheet program.

Exporting your events:

Click **Export CSV** to download all your current events as a file called `calendar-events.csv`. Use this to save your work — since the app doesn't store anything permanently, exporting is the only way to keep your changes for next time.

Add Event

Click **Add Event** to expand the form. Fill in the fields and click **Save Event** to add it. Click **Cancel** to close the form without saving.

For a Birthday or Anniversary:

1. **Name** — The person's name, or both names for an anniversary (e.g., "John & Jane Smith").
2. **Type** — Choose **Birthday** or **Anniversary**.

3. **Month** — The month of the event.
4. **Day** — The day of the month.
5. **Groups** — Check any groups this event belongs to (optional).

For a Recurring Event:

Recurring events repeat on the same day of the week, either every week or once a month.

Examples: "Church - 9 AM" every Sunday, or "Book Club" on the 2nd Tuesday of each month.

1. **Name** — The name of the event.
2. **Type** — Choose **Recurring**.
3. **Pattern** — Choose how it repeats:
 - **Every week** — Happens every week on the chosen day (e.g., every Tuesday).
 - **Nth weekday of month** — Happens once a month on a specific occurrence of a day (e.g., the 3rd Monday).
4. **Day of week** — Choose Sunday through Saturday.
5. **Occurrence** (only if you chose "Nth weekday of month") — Choose 1st through 5th. Note: not every month has a 5th occurrence of every day, so a "5th Sunday" event will simply not appear in months that don't have one.
6. **Groups** — Check any groups this event belongs to (optional).

Events List

Below the form, you'll see a list of all your events. The list shows each event's name, type, and date (or recurrence pattern for recurring events).

Searching and filtering:

- **Search box** — Type part of a name to filter the list.
- **Filter by Group** — Show only events belonging to a specific group.
- **Filter by Month** — Show only events in a specific month. Recurring events always appear regardless of which month you filter by.
- **Filter by Type** — Show only birthdays, only anniversaries, or only recurring events.

Editing an event:

Click **Edit** on any event to change its name, date, groups, or other details. Click **Save** when done, or **Cancel** to discard changes.

Deleting an event:

Click **Delete** on any event, then click **Confirm**. Click **Cancel** if you change your mind. Deleting no longer removes an event for good — it moves the event to the **Deleted** section just below the events list, and the event stops appearing on the calendar and PDF.

Restoring a deleted event:

Below the events list, a **Deleted (n)** heading appears whenever you have deleted events. Click it to

expand the list, then click **Restore** next to any event to bring it back to the active list. A restored event returns to the calendar as long as its group is enabled. Deleted events are kept in your exported CSV (in the **Deleted** column) so they survive saving and reloading your file, but they never appear on the calendar or PDF until you restore them.

Preparing Your CSV File

You can create your event list in any spreadsheet program (Excel, Google Sheets, Numbers, etc.) and save it as a CSV file. The file should have these columns:

Column	Description	Required?
Name	Person's name or event name	Yes
Type	B for birthday, A for anniversary, R for recurring	Yes
Month	Month number (1–12)	Yes for B/A, leave blank for R
Day	Day of the month (1–31)	Yes for B/A, leave blank for R
Groups	Group names, separated by commas	Optional
Recurrence	Recurrence pattern (see below)	Required for R, leave blank for B/A
Deleted	true for a deleted event, leave blank for active events	Optional

Example rows:

```
Name,Type,Month,Day,Groups,Recurrence,Deleted
Alice Smith,B,3,15,Family,,
Bob & Carol Jones,A,6,20,"Family, Friends",,
CHURCH - 9 AM,R,,,Hooper,weekly:Sunday,
COMMUNION,R,,,Hooper,nth:1:Sunday,
BIBLE STUDY,R,,,Hooper,weekly:Tuesday,
Old Coworker,B,5,9,Work,,true
```

Recurrence patterns:

- `weekly:Sunday` — Every Sunday
- `weekly:Monday` — Every Monday
- `weekly:Tuesday` — Every Tuesday (and so on for any day)
- `nth:1:Sunday` — 1st Sunday of the month
- `nth:2:Monday` — 2nd Monday of the month
- `nth:3:Wednesday` — 3rd Wednesday of the month
- `nth:4:Thursday` — 4th Thursday of the month (like Thanksgiving!)
- `nth:5:Friday` — 5th Friday of the month (skipped in months without one)

Tips for your CSV file:

- The first row must be the header row with column names.
 - If an event belongs to more than one group, wrap the groups in quotes: "Family, Friends".
 - Day names in recurrence patterns are not case-sensitive: `week ly : sunday` works the same as `week ly : Sunday`.
 - Don't worry about capitalization in names — the calendar automatically displays everything in capital letters.
-

The Calendar Preview

The right side of the screen shows a live preview of your calendar. It updates instantly as you change settings. Each day cell shows:

1. The **day number** in bold.
2. **Moon phases** (Full Moon, New Moon, First Qtr, Last Qtr) next to the day number.
3. **Recurring events** (e.g., CHURCH - 9 AM).
4. **Birthdays and anniversaries** with a prefix: B: for birthdays, A: for anniversaries.
5. **Holidays** at the bottom of the cell.

If a birthday or anniversary falls on a day that doesn't exist in the current month (like February 30th), it appears in a separate "overflow" section below the calendar grid.

Printing Tips

- The PDF is designed for **letter-size paper** (8.5" × 11") in **landscape orientation** (the wide way).
 - Print at **100% scale** (actual size) for best results.
 - The calendar uses black and white only, so it prints well on any printer.
-

Important: Saving Your Work

Papa's Calendar does not save anything between sessions. When you close or refresh the browser tab, all your events and settings are gone. To keep your work:

1. **Before closing**, switch to the **Events** tab and click **Export CSV**.
2. Save the downloaded file somewhere safe.
3. **Next time you open the app**, upload that same CSV file to pick up where you left off.

Your CSV file is your master data file. Keep it backed up!
